Course structure

What we teach:

The primary objective of the department is to facilitate teaching-learning environment including practical training and research in the discipline of psychology. Applications of psychology are major focus of the department.

Our offerings:

We offer three years undergraduate Bsc (Hons) in psychology course and two years post graduation course ie, Msc. in Applied psychology

The imparting practices:

The faculty practices both traditional and innovative teaching methodologies and corresponding curriculum ideas. The students will find the balance of discipline and freedom needed in their classroom to be both educated and inspired.

Integrating technologies:

As a student of the 21st century, students will learn to integrate various types of technology in our immersive classroom environment to imbibe relevant and assessable content.

Internships:

We blend theories and practical implications of acquired knowledge. Students will observe and engage with teachers and mentors in various settings: Hospital OPDs, NGOs, Private Psychiatric Hospitals, Industry visits as well as contemporary learning centers.

Final year project:

Students will have the opportunity to synthesize all their knowledge and experience in a comprehensive final project and seminar presentation.

Subfields

Clinical Psychology

This is the most prominent subfield of psychology, constituting about 36-49% of the total field of psychology. It deals with the study, diagnosis, and treatment of psychological disorders. Clinical psychologists apply psychological principles and research to assess, diagnose, and treat patients with mental and emotional illnesses. They often work in private practices, but many also work in community centers or at universities and colleges.

Counseling Psychology

Counseling psychology is closely linked to clinical psychology. However, counseling psychologists deal with comparatively milder problems of daily life that do not normally fall under any diagnosable category. These milder problems might be in the form of adjustment problems, difficulty in choice of career and so on. Marital counselors, career counselors also fall under this broad classification.

Neuropsychology

Neuropsychology is an area of psychology is known by a number of titles including behavioral neuroscience, psychobiology, and neuropsychology. Neuropsychologists study the relationship between the brain and behavior, such as how the brain and nervous system impact our thoughts, feeling, and moods. This field can be thought of as a combination of basic psychology and neuroscience.

Social psychology

Study social behaviors, including how individual self-image and behavior is impacted by interactions with others. These psychologists often conduct research in academic settings, but others work in such areas such as advertising and government sector.

Experimental psychology

Experimental psychologists utilize the scientific method to study a while range of human behaviors and psychological phenomena. Experimental psychology is often viewed as a distinct subfield within psychology, but experimental techniques and methods are actually used extensively throughout every subfield of psychology. Some of the methods used in experimental psychology include experiments, correlational studies, case studies, and naturalistic observation.

Personality psychology

Personality psychologists study the characteristic patterns of thoughts, feelings, and behavior that make each person unique. These psychologists often work in academic settings as instructors or researchers.

Subfields

Developmental Psychology

Developmental psychologists study the physical and cognitive development that occurs over the course of the lifespan. These psychologists generally specialize in an area such as infant, child, adolescent, or geriatric development, while others may study the effects of developmental delays.

School Psychology

School psychologists work within the educational system to help children with emotional, social, and academic issues. These psychologists collaborate with teachers, parents, and students to find solutions to academic, social, and emotional problems.

Industrial & Organizational Psychology

Psychologists in this field apply psychological principles to research on workplace issues such as productivity and behavior. Some psychologists in this field work in areas such as human factors, ergonomics, and human-computer interaction.

Health psychology

This field is centered on understanding how psychological, biological, social, and environmental factors influence health and wellness. Health psychologists often deal with health-related issues such as weight management, smoking cessation, stress management, and nutrition. They are also involved in designing public prevention programs designed to educate people about risky behaviors and adopt healthier ones. This field is closely related to behavioral medicine. Palliative care is also a part of this field.

Educational Psychology

This field is concerned with teaching and learning processes, such as the relationship between motivation and school performance. Educational psychology is an integral part of the subject education. It helps us decide the appropriate educational set-up and the most effective medium of teaching and impartment of knowledge.

Rehabilitation Psychology

This field is gradually becoming an indispensable part of society. This field aims at helping people with any kind of disability, illness or physical/ mental loss readjust themselves to their family and society. It equips these individuals with better skills, aids and guidance.

Besides the fields described, military psychology, sports psychology, community psychology, evolutionary psychology, genetic psychology, positive psychology are also some important fields of psychology that are gradually gaining importance.
